

English

These instructions explain how to update the firmware of your S1 Pro system. Once your firmware is up-todate, you can use the Bose® Connect app to make future updates.

Note: A USB 2.0 Type A to micro-USB cable is required (not included with the S1 Pro).

- 1. Visit **btu.bose.com**.
- 2. Click Accept and Continue.
- 3. Click **Download** to download the Bose® Device Updater.
- 4. Install the Updater.
- 5. Once installed, open the Updater. Your web browser will change to show all compatible products.
- 6. Plug your S1 Pro into a power source.
- 7. Connect your S1 Pro to your computer using a USB cable. The Updater will identify your S1 Pro automatically. *Note:* If your S1 Pro is not identified automatically, select the S1 Pro from the product list.
- 8. If your S1 Pro needs a software update, your screen will read, Software updates available.

Software Updates
Software updates available.
Firmware Version 6.1.2
Bug fixes and feature enhancements.

Note: Do not unplug or power off your S1 Pro while the update is in progress.

Software Updates
Updating software to Version 6.1.2
14%
Time remaining: about 5 min
Ensure that the device power remains on until the update is finished and do not unplug your product.

9. Click Apply Changes.

10. Once the update is complete, your screen will read, Your software is up to date.
